A. Channel

1. Gain control

It adjusts input signal level to balance the S/N ratio and dynamic range. To get best effect, adjust this knob: make PEAK LED flashes sometimes to avoid channel distortion.

Mic input gain range: 6~50dB, line in gainrange: +10~-34.

2. COMP:

It adjusts channel compression. Turn clockwise to increase compression ratio and gain will adjust automatically.

3. HPF

It turns on/off the HPF with 18 dB octave to activate 80 Hz LF filter. You can also use it to reduce mains hum noise or stage mic noise.

4. EQ control

Hi: when you set it to max, 12KHz frequency level boosts +15dB. To min, and the 12KHz frequency levelcuts -15dB.

MID: when you set it to max, 2.5KHz frequency level boosts +15dB. To min, and the 2.5KHz frequency level cuts -15dB.

LOW: when you set it to max, 45Hz frequency level boosts +15dB. To min, and the 45Hz frequency level cuts -15dB

5. AUX-DSP

These two knobs are used to the level of signal sent to AUX-DSP BUS, and then to external DSP, or to built-in DSP module. DSP knob can also adjust channel level.

6. PAN

Set it to middle position, then sound image will be in the middle of the stage. It can also adjust the left/right output signal.

7. PEAK LED

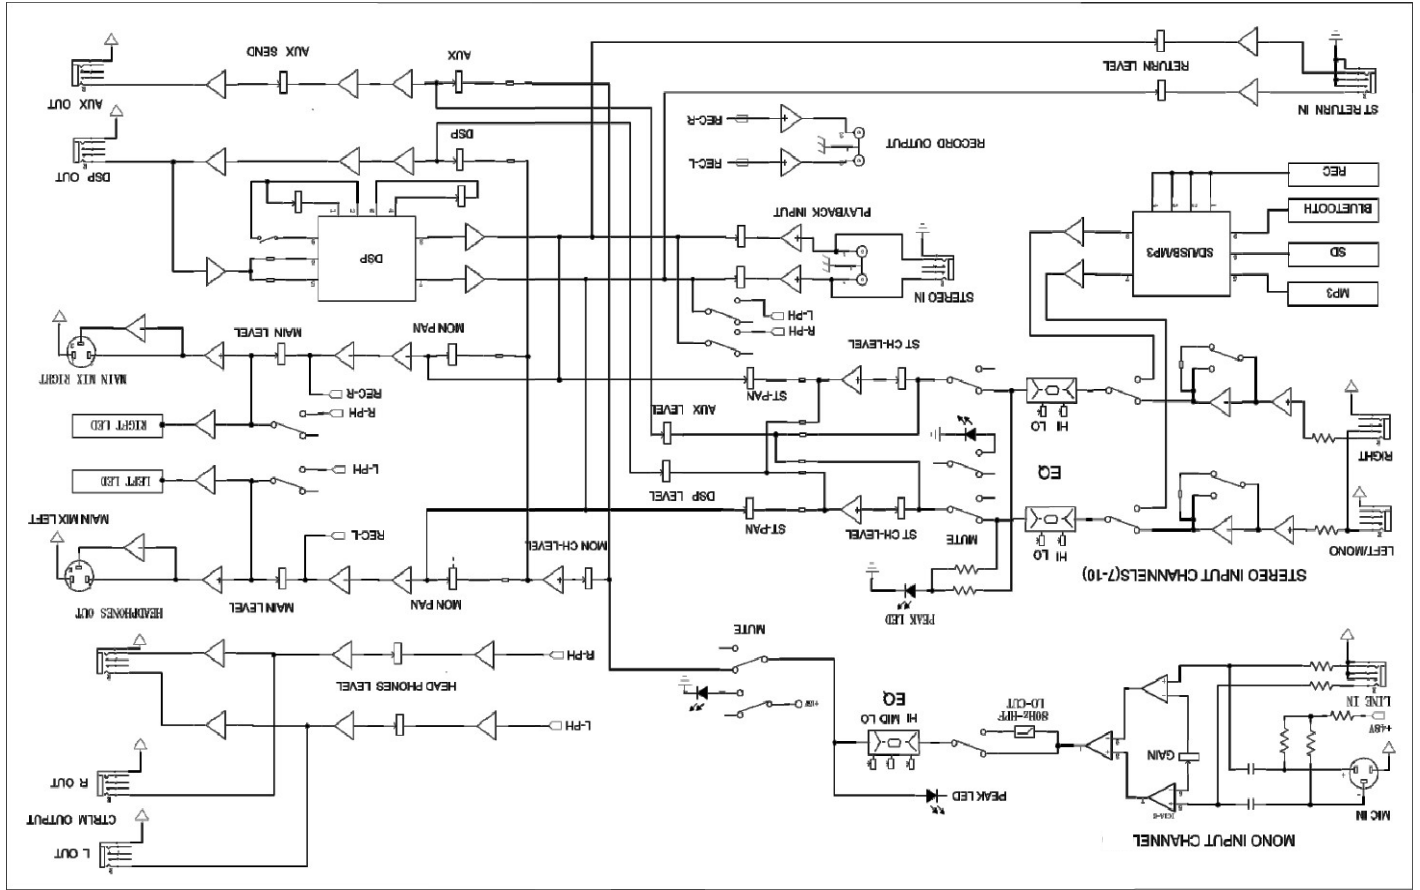

When signal reaches the level of clipping level deducted 3dB, PEAK LED lights up red.

8. MUTE & LED

Each channel is designed with MUTE button. Press it to mute the channel. The mute LED lights up.

9. FADER

It adjusts the level of channel signal which is sent to main mix out. Note: set the unused faders to minimum position.

Bal/unbal mode of TRS/XLR connectors

1/4 "TRS or XLR connector bal/unbal modes; please refer to below:
1/4 " connector

Connection

The supplied 1/4 "TRS and XLR connector to connect with pro audio equipments;
please refer to below:

Selecting and playing individual tracks from an USB or SD card.

Press and hold the PLAY/PAUSE button.

Use the forward/back buttons to select the required track.

Release the PLAY/PAUSE button.

Your selected track will now be cued and will play when the PLAY/PAUSE button is pressed again.

Useful tips for getting most out of your playback facility during a live performance :

Record a track with no sound on it, say 30 seconds long. Call this track '001 - Silence' and make sure it's always the first track in your file. The reason to do this, is to allow you sufficient time when inserting your memory stick to allow you to enter the play/pause track cueing facility without accidentally playing a track. You can then select the track want leaving the player in PAUSE ready for the performance.

Add a few seconds (up to about 30 seconds) of no sound (quiet) to the end of all of your recorded tracks.

The player will automatically play the next track in sequence if you have multiple tracks, so adding this quiet section to your tracks allows you time to stop your player and cue your next track, to avoid the player going into an unwanted track

Installation

1. There should be no obstacles before the speaker cabinet. You had better put the speaker cabinet on a speaker stand.
2. Use professional devices to suspend or install the speaker cabinets to avoid hurt.
3. Use high quality cable to ensure the best tone.
4. Please match the right power and impedance of power amplifier and speaker cabinet.
5. Do not point the microphone to the speaker cabinet to avoid feedback.
