ILINE COLUMN ARRAY

Complete iLINE COLUMN ARRAY set

"Column Array" column systems

Aesthetically pleasing, the system comes with 2 families of columns. One for installation with columns iLINE23, iLINE43, iLINE83, and the other for stage performance with the iLiNE83B model.

They are linked and powered by an active subwoofer, the iLINEsub12A which embeds a double amplification of 700W/5 Ohms in class D for the columns and 700W/4 Ohms for the lower part because we can also add the iLINEsub12A as a reinforcement, which is the passive version of the subwoofer.

iLINE Series

**Go to dedicated website :
iline-series.audiophony.com**

Modulate your desires.

Whether for mobile or fixed use, the system answers all your problems.

The system offers multiple possible combinations, for example, 2 columns, 1 subwoofer or 2 subwoofers, 2 columns, etc.

Once controlled by an active subwoofer, the iLINEsub12P passive subwoofers can supply the satellites for numerous configurations.
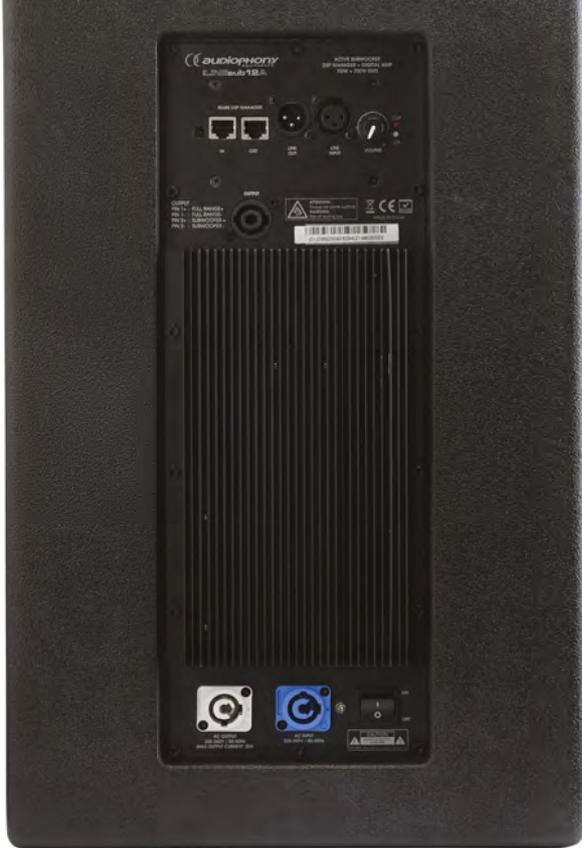

A system that travels well.

Lightweight and robust, the subwoofers are made of a very resistant wood, Finnish birch multi-ply plywood with a protective polyurethane resin coating, which is very resistant to scratches.

You can transport your entire iLINE system anywhere.

Touch the power, that's all!

If you want to touch the system's sound settings, an "iLINEbox" USB to RJ45 converter is sold separately. This box is needed if you want to adjust the built-in DSP.

The native DSP is preset to factory settings in order to ensure optimal system behaviour.

Only compatible with Windows

Available in black or white finish for service or installation.

ATOM ACTIVE SPEAKERS

The ATOM series is equipped with a simple DSP and is easy to use. It allows you to adjust and configure your speaker to the required use with the touch of a button. The internal processor's different presets adapt your speaker to the current use (front, backstage, etc.) but also the current sound application (DJ, Live, Speech, etc.) without forgetting the ability to correct bass and treble +/- 10dB in order to compensate for a room's acoustic problems, for example.

Each ATOM speaker offers two inputs and one output, a large choice of connectivity in order to connect all kinds of sources at Micro or Line level.

The design of this new series provides usage flexibility and exceptional installation thanks to M10 attachment points, backstage position and an ingenious 35mm double position base allowing the speaker to be used on a stand in a straight or inclined position of 7.5° downwards.

DANTE™ requirements:

Currently not all audio equipment can talk Dante™ language. The new Synq Dante™ I/O interfaces translate analog audio to and from Network Audio (Dante™).

Analog → Dante™:
- Connect your MIC to the Dante™ network
- Connect your Guitar, audio player, etc. to the Dante™ network

Dante™ → Analog:
- Connect the Dante™ network to your analog amplifier/active speaker
- Connect the Dante™ network to Recorder with analog input
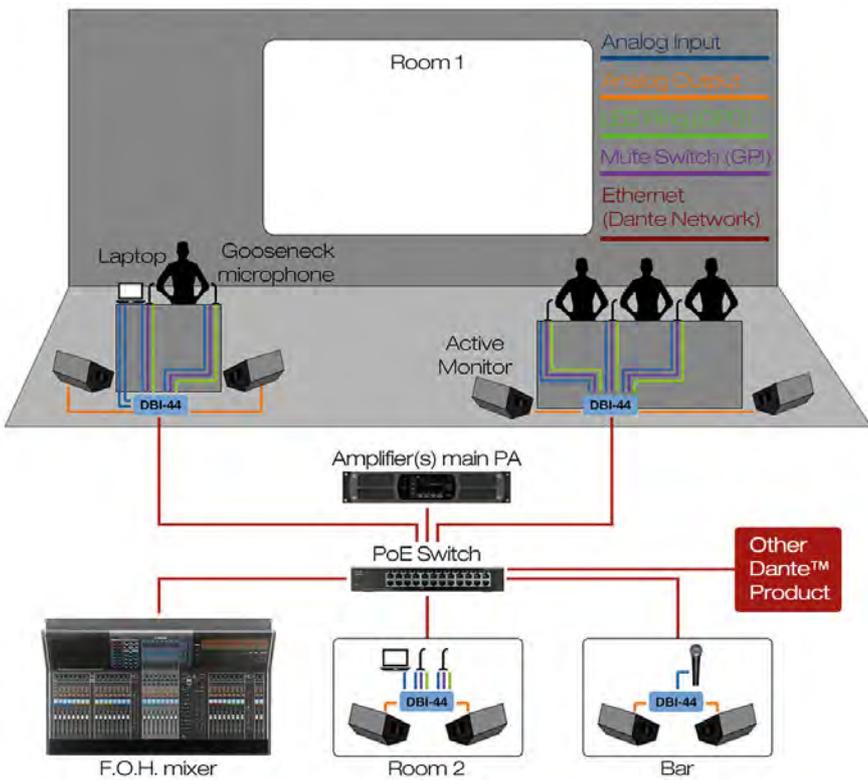

Multi-room install example using PoE

Room 1:

- Easy cabling :
1 single Cat5e network cable transports all audio signals in both directions. This makes it very easy to expand and modify the existing system.
- A single GPI trigger (here a potentiometer on the desk which is plugged into the DBI-44) sends a signal to the GPO connected devices (the gooseneck microphones and a LED light) to turn them on and off. GPIO can also be used to trigger or communicate with anything else on the network.
- Record and play audio from and to any room on the Dante™ network.

Room 2:

- No need for a separate mixer:
Mix all sources (2 microphones, one audio input from a computer, the audio from the main room) using the DBI-44 its integrated web browser and add EQ, compression, etc.
- If you need extra audio inputs just add an extra DBI-44 box. Thanks to the DBI-44 its integrated 8x8 matrix you can easily mix up to 8 separate inputs.
- GPIO allows you to control the gain of each microphone locally. Just connect a potentiometer to one of the GPI inputs.

Bar:

- The DBI-44 box allows the playback of background music originating from any sound source in the Dante™ network.
- The DBI-44 box also allows to connect an extra microphone for announcements

BROADCASTING

The columns are delivered with wall mounting brackets.

Aluminium speakers are designed to resist humidity. The wiring is mounted on a cable gland to ensure the waterproofing.

The multi-speaker system columns allows a diffusion very wide while reducing the vertical angle.
This prevents echoes.
The column is therefore the ideal tool for speeches in big spaces.

DIGITAL MATRIX

DZONE88 is an 8 audio digital input and 8 audio digital output matrix. It's entirely configurable and offers a large range of solutions for easy or more complicated installations thanks to its multi zone router. The matrix can be hub USB or ethernet configured and driven through the management software that is supplied.

Its 8 balanced inputs accept a MICRO or LINE level and can be freely directed throught the 8 outputs. Its powerful DSP processor enables you to act on all input signal processing with : Alim Phantom, Anti-larsen, Noise Gate, Compressor, parametric EQ, AutoMix and on output with Parametric EQ, Delay, Compressor and limiters.

You also have 8 GPIO ports that can be set and used towards a specific functionality.

HEARING LOOP SYSTEM

More information :
https://audiophony-pa.com

On demand, feasibility study and site plan.

ABOUT THE HEARING LOOP SYSTEM

A hearing loop or induction loop is a hearing aid system for the hearing-impaired using a magnetic induction loop.

With this system, the sound from a speaker's microphone, PA equipment, TV set, etc. is transmitted wirelessly to the hearing aid of the person, who can hear it without being disturbed by any ambient noise. This system is mainly used in public places (conference rooms, cinemas, courts, churches, counters, etc.)

A large number of conventional hearing aids incorporate the "T" loop function.
Hearing loops are mainly installed in rooms.

The installation consists of an electrical wire that travels around the perimeter of the room thus forming a loop. This loop is connected to an audio amplifier. The hearing aid has a coil, often called "T" or "T-coil".
This coil, placed inside the hearing aid, is also made of a wire that makes a large number of turns.

MAGNETIC FIELD

The magnetic field generated by the large loop around the room will cross the small loops in the hearing aid and, by the principle of induction, the electrical signal present in the large loop will end up in the small ones.

This is how the signal from the audio amplifier is transmitted to the hearing aid, which will then return it to the ear of the hearing-impaired person.

REGULATIONS

The 2005 - 102 Act of 11 February 2005 sets out the requirement for public establishments to be accessible to people with disabilities before 1 January 2018
This obviously applies to establishments open to the public, such as:
Administrative and cultural facilities,
Health buildings,
Sports facilities,
But also supermarkets, cinemas, public transport, etc.

Facilities must comply with the standard: EN 60118-4:
Background noise (electromagnetic pollution) must be < 32 dB at 400 mA/m
The magnetic field must be between +/- 3 dB for a signal from 1 kHz to 400 mA/m
The frequency response must be 100 Hz - 5 kHz at +/- 3dB

Hearing aid simulator for loop amp test

Code : H10798

pa audiophony public-address

BM-TEST is a compact listening device for magnetic induction loop systems. It can be used in different situations:
• To determine if an induction loop is working properly
• For hearing-impaired people who do not wear a hearing aid
• For wearers of hearing aids that do not have a "T" function
The kit comprises:
1 x loop receiver
1 x headset
2 x AAA batteries
Frequency response: 20 Hz - 6 kHz
Battery life: >100 hours

BM-SCAN
Magnetic field meter

Code : H10878

pa audiophony public-address

The BM-SCAN field strength meter has been designed to ensure that magnetic loop systems are installed and certified according to the new IEC 60118-4 standard. When these standards are met, the comfort of the user will be identical wherever he/she uses a hearing aid with the T position.

3.5 mm headphone jack socket
Power supply: 9 V battery (not included)

ADVANTAGES
of the LEDs?

- **Long life, low maintenance**
- **Low energy cost**
- **Resistant to shocks and vibrations**
- **Very compact format**
- **No infrared and UV emissions**

Ra 80

RA OR CRI
An Ra equal to 100 corresponds to natural daylight. At this level, the colours are perceived without any change (or loss) for the human eye.

LEDs which diffuse artificial light cannot claim an CRI greater than 90. In places that require that colours are complied with (e.g. points of sale or exhibitions), it is essential to provide equipment with an index greater than 70).

COLOUR TEMPERATURE

The unit of colour temperature is Kelvin degree (K°).
The lower the degree of temperature, the warmer the light. The higher the degree of temperature, the colder the light.

WHAT TYPE OF LED?

5054: 4 chips (RGBW)
of 0.32w/led
Good brightness
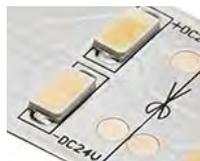

5630: 1 chip of 0.33w/led
Very high brightness
Only monochrome

5050: 3 chips (RGB) of
0.24w/led
Good brightness

5050: 1 hot white or cold
white chip of 0.24w/led
High brightness

Ideal for ambient lighting

3527: 2 chips (warm white
cold white) of 0.16w/led

WS2812B:
3 RGB chips of 0.24w/led with integrated control circuit
Each LED can be controlled independently

LED RIBBONS

The ribbons of the SMARTTAPE range are equipped with the latest WS2812B LED technology. In SMD5050 (5x5mm) format, the integrated control circuit is directly embedded in the component. More discreet, these LEDs make it possible to have ribbons of only 10mm width with a pitch of only 16mm for the SMARTTAPE6020 model.

The installation is very simple, as only 3 cables are needed for operation ("+", "-", Data in).

Associated with a power supply and a SMARTCTL controller, you will get 300 kinds of patterns with the ability to control the speed and brightness.

HOW TO CHOOSE A POWER SUPPLY?

What is the consumption of a ribbon in W and which power supply should I choose?

Example:
9m of RGB ribbon with 60 LEDs/m 14.4 W/m in 24 V (COLOURTAPE6065)

Consumption of a length L of ribbon (in W) = length (m) x power/meter (w/m)
The ribbon will consume 14.4 x 9 = 129.6 W

Power supply choice:
An additional 10% of power must be added to the power supply.
In the same example:
129.6+10%= 142.56 W

POW246IP2 which is 150W

The perfect all-in-one ArtNet NODE solution with 8 highly configurable XLR 3pin DMX ports.
The 8 DMX ports can all be configured as in or outputs:
Configured as input: normal or backup mode
Configured as output: single, LTP, HTP, RDM or zero mode
You can store all your personal settings and routing options to the different user memories.
Multiple pre-defined routing options available:
4 DMX inputs with 4 local clone outputs DMX and ArtNet output
8 DMX outputs from ArtNet input, with Backup line possibilities
Different merger combinations in both directions:
Combine DMX in + ArNet universe to Artnet or a physical DMX output (LTP or HTP)
Combine 2 DMX inputs to ArtNet (LTP or HTP)
Multiple mode DMX splitter modes:
One 1 to 7 splitter: 1 DMX input to 7 isolated DMX outputs
Two individual 2 to 3 splitters: each with 1 DMX input to 3 isolated DMX outputs
100% electrical isolation between all in/outputs: problems on 1 port will not influence the other ports.

DMS-26

The perfect all-in-one solution to secure your installations.

The perfect all-in-one solution to secure your DMX-installations: MERGER + SPLITTER + BOOSTER

100% electrical isolation between all in/outputs!
2 DMX-inputs + 6 DMX-outputs, each equipped with 3pin and 5pin XLR-connectors.

The booster function analyses the incoming DMX-signal and builds it back up from scratch to make it perfect for further use.

The merger function combines 2 DMX-signals in different ways:
HTP: the highest value of 2 identical channels from 2 DMX-signals will have priority.
Backup: when the DMX-signal on input A fails, the DMX-signal in input B takes over immediately.
Merger: DMX-signals from 2 different controllers can be combined and send over 1 cable, you can choose the start address of the second controller.

The splitter function distributes the DMX-signal(s) from the input(s) over 6 identical outputs that are 100% isolated from each other: problems that occur on 1 output will not influence the other outputs!

The timing of the DMX-outputs can be adapted from 23ms to 45ms, increasing compatibility while connecting ¨slow» DMX-devices to ¨fast» DMX-controllers.

Output behavior can be selected when suddenly both DMX-inputs fail:

Null: no DMX signal on the outputs
Hold: keep the last DMX values on the outputs.
Clear: set the DMX values on all outputs to zero.
Easy setup via 4digit LED display
